The basis of the rights, freedoms and legal interests

Boris Mayorov

My parents dedicated

The system of values based on the dignity [of man](#)

The history of man, all humanity is filled with the search for and justification of meanings, values for the survival, modernization and sustainable living environment in the original or conventional relative and absolute orientation of their [social time](#) and their social level. In this community, [the individual in different periods of his life](#) can live in one landmark (for example: parents' home, friendship, love, work, career Vertical command-administrative system or in democracies, and you can focus on the companions, local Tale, the proletarians of all countries, and so on), one value [or not to feel and not be conscious of anything as valuable](#), while in the studies, in finding, depressed, in a stable,

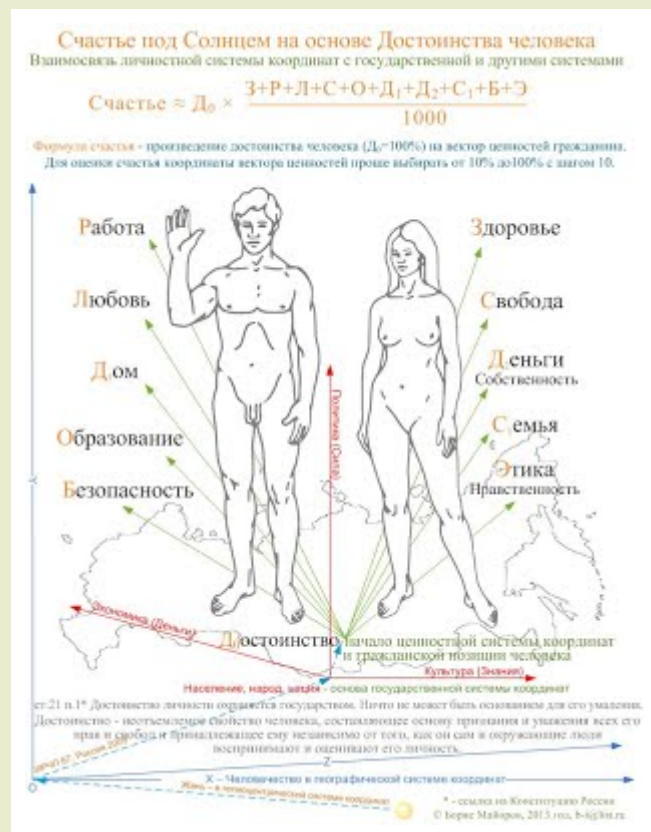

Idea

In the Age of Enlightenment (Descartes, the beginning of XVII century -.. Rousseau and Voltaire, the end of the XVIII century) appeared the idea of natural rights in the heliocentric universe.

In the XIX century, Charles Darwin essentially substantiated dignity of the person, its main feature that has been formed by natural selection anthropoid for millions of years. It has been proven that the person is not a servant of God, as a social being with dignity, and only at their consent to the king or the president of his choice.

Previously discussed for centuries the divine image of man and the love of neighbor in the geocentric world created by God.

On the basis of these ideas have been created and adopted the Bill of Rights in the United Kingdom, the Bill of Rights in the United States, the Declaration of the Rights of Man in France

Parents, elites or leaders carried out social management, orient or disorient a person or people by force, money and wisdom in various proportions, provide opportunities for the government or in the period of crisis of society is left of human population for self-organization. In the period of crisis of society often appear adventurers who [tricked live with his hands](#) .

From communities of cannibals, who somehow got along together, to modern legal concepts developed societies with respect for human dignity and the practice come a long historical path.

At different times people relied on the subjects of the gods, shamans, his family and tribe, territory and religion, then by nationality and country estate and ideology. Now there was a focus on the culture of consumption and trade. At the same time, social poorly understood and defined for each region and the communities of the region. At the same time 85% of the population lives in such a way as it should be to all living things - without disputing, not reflective, does not analyze their actions.

In our country most people after the collapse of the Soviet regime, the total did not acquire modern scientific guidance system, but rather absorbed fragments of different, often false, concepts and ideas. Their value systems are filled and changed even during the week. This is particularly noticeable in terms of political, ideological and economic struggle of competition, when it is necessary to manipulate the masses of a particular region or country. The main social timeless landmark date for all communities from a group of three people up until recently existed empires - is the subordination of the current king, emperor, leader, president, commander, boss, husband, chapter, the leader ... or conditional oath of unquestioning obedience or by an agreement in different variations until work and their supposed to accept, understand and build their tolerant attitude to people on the basis of the existing reality.

I hope that in future, people will be able to soften the relations of subordination and somehow influence the decisions made by the leader.

In my opinion, Russia's population has a high level of social inertia, live as if in the Soviet community, said patterns of television broadcasts and is focused on the leaders in power. I believe that the power, money and knowledge of today

First and Second World War revealed the need for universal human rights treaties. In 1941, Franklin Ruzvelt in his address, "State of the Union" called for support of the four essential freedoms: freedom of speech, freedom of worship, freedom from want and freedom from fear. This gave new impetus to the development of human rights as a necessary condition for peace and end the war.

When the public became aware of the atrocities that are committed by Nazi Germany, it became clear that the UN Charter did not accurately defines human rights. Universal agreement became necessary for Human Rights.

UNIVERSAL DECLARATION OF HUMAN RIGHTS adopted at the third session of the UN General Assembly resolution 217 A (III) of 10 December 1948.

Article 1.

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

...

In 1993, Russia adopted a constitution, which laid the foundations of the protection of human dignity, his rights, freedoms and legitimate interests.

...

December 7, 2000 the European Parliament solemnly proclaimed the Charter of Fundamental Rights of the European Union.

Today, at the beginning of the XXI century, the emerging second Enlightenment. The scientific community, each person needs to participate in the implementation of declarations of human dignity with

junior, bordering on a voluntary operation. This was made possible not only because of the lack of transparency of the calculations; write about it, saying, "[asserts science](#)" ... and the transition to a sustainable development of Russia seems to appear after step omnipotence of regional clans, when the ratio of power, money and knowledge elite and the population will be 50 x 50. You can take the output of scientists, that man as a social animal origin completed the stage from the monkey, but adequate according to the social community, local time, in many countries have not developed, and this process is likely only in the initial stage. In this case, social trends and the mass of people do not understand the problems of progress by participating in them because of the circumstances, and radically change social traditions for them harmful. This stalemate for a small number of progressive-minded people in Russia - to walk silently systems or stand with a poster in pickets.

The evolution of complexity of social systems, development trends of the communities will inevitably lead to the emergence of forces among the population - mass of horizontal relations on the basis of human dignity will build multiple non vertically based on the law and ethics, taking into account the multicultural factor. Already today, for the peaceful development of sustainable communities, coexistence of cultures, forms a common and clear to every system of human values, solidarity and participation of everyone in community affairs - shut out or live in their virtual space and person, and the state is inefficient. Through universal education and technology are growing wealth and population knowledge. Achieving stability of complex social systems will stimulate the desire of each person to the values of happiness, thereby minimizing losses and rational use of scarce resources in the economy.

In the XXI century the trend of separation of man from archaic concepts of vertical relations between the state, the collective tribe and so on, replacing them with the law and ethical standards of respect for their rights, freedoms and legitimate interests. Nascent another human quality - oriented and value in geographic coordinates, just starting to show. Born and cognitive science, and technology of its use for the creation of new communities and happy lives of individuals.

Today in Russia hardly created a new solidarity based on the people with the dignity and value of human orientation, which will bring together families, professionals, communities of interest and other primary cells of civil society. I believe that at the end of the XXI century will be used personal [quantitative calculation of the level values](#) a person, taking into account [the genome of](#) a particular person, to make a qualitative transition from Homo sapiens to value-oriented person.

The man and the community is always striving to improve the efficiency of its kind of activity, sometimes referred to as the meaning of life. However, this factor if it and will count ever, sure to be a little like a locomotive 8% or even less. And this level was for centuries to ethnic and throughout the life of each of us, what he would not do it. Human activities are often not useful, but as the work of the engine, of which the use of reason sometimes teachers.

In the course of industrialization (Art Nouveau), the average level of public polytechnic education has been achieved,

every person on Earth. It is necessary to ensure the sustainable development of each person and the public a smooth transition from authoritarian states to self-government people.

Author and editor of the website offers clear each person personal system of values of coordinates (human values) based on the merits of the concept as a common tool to update the nation, other communities and personal happiness.

War is always allowed to have accumulated in peacetime errors, quenched with harmful human activity. All wars, including the cold - a social catastrophe of society unguided still factors of development, building a community. Gulag and the Holocaust must not be repeated.

It is time for a second Enlightenment, scientific and humanitarian revolution, when the value orientations based on the dignity of the field of natural human rights will be included in every human happiness technology, ensure the sustainable development of communities.

In Russia, the history of both the public and human rights, its advantages were incidental. In the XX century the so-called Soviet authorities almost completely erased not only the concept, but also a sense of self-worth. The Soviet man on the basis of all the total raised "own pride."

[Neither Soviet constitution from 1918 to 1978](#) did not include in their articles even one word with the root "worthy." The concept of human dignity has been included in Russia 1993 Soviet Constitution of the year.

descendants of ethnogenesis theory [Lva Gumilova](#) , and today the majority of the energy [is uncontrollable](#) . This is typical and Russia: it often ruined their own leaders of the people, and not conquerors - the barbarians. The world has reached the limits of intensive development. In my estimation, since the late 60-ies in the USSR and in the socialist world countries before, against the background of the utopian Communist Party plans to have been set up criminal community of the current law and common sense, and after the collapse of the USSR, these corporate structures, some involving foreign and transnational corporations have grown, multiplied and captured Russian: send representatives to the Government and as deputies to the Parliament with a ticket purchased from any party or gentlemanly set of relevant recommendations d, up to doctoral theses of any science.

For corporations, the main thing - profit and Europe have come together to simplify the movement of ideas, people and capital, and the sustainable development of EU corporate priority. However, on the way the EU has a lot of difficulties.

In the transition period in Russia, probably the KGB, now the FSB plays an important role in governing the country and trying to get over the corporations, whose history is unfolding before our eyes. I believe that this method of transition, [the Russian version of corporate governance formation](#) .

Russia today, the need for universal literacy of values as the basis for life in the information society. Thus it is necessary, and the constant improvement of welfare of the population, and especially its central part. Social management at all levels is necessary to promote horizontal ties of solidarity for people in different communities, contribute to the training of personnel for the modern management of the country and co-operation in corporations around the world to import from abroad, technology experts and capital. Russia during the transition to the postmodern can be for neighboring countries capital storage and collaboration developed countries have no great power with missiles and comfortable supra-national country with a developed corporate system, actually united with their transnational links with the European Union and the rest of the value-oriented world.

Direct minority dictate the story goes, a control option through democracy in Russia did not take place, and the self-value-based population was just making its way into the minds and in practice, yet developed countries. And here Russia has a chance to not drag the tail of the West (which is not bad), and reach the same level as developed countries, steadily developing not only the army, economy and science, but also value-oriented population.

In today's world after the collapse of empires and the transformation of the authoritarian regimes of the twentieth century, the end of "cold war", the scientific and technological revolution, and the era of the liberal economy of the developed countries thawed billions of people, the masses freed for life in the new environment [the come postmodern](#) . For the formation of communities after the democracy and liberalism (steady, not rapid development due to the processing of raw materials, and through innovation and enhancing each person) needed new bases and guidelines for constructing personal and social happiness. Once again, social history, but [for the first time on a global scale](#) has

We, the multinational people of the Russian Federation, united by a common fate on our land, establishing human rights and freedoms, civic peace and accord, preserving the historically established state unity, proceeding from the universally recognized principles of equality and self-determination of peoples, honoring the memory of ancestors who have conveyed to us the love and respect for Fatherland and faith in good and justice, reviving the sovereign statehood of Russia and asserting the firmness of its democratic basic, striving to ensure the well-being and prosperity of Russia , Proceeding from the responsibility for our Fatherland before present and future generations, recognizing ourselves as part of the world community, adopt the CONSTITUTION OF THE RUSSIAN FEDERATION.

Article 21

1. Human dignity shall be protected by the state. Nothing can be the basis for its derogation.
2. No one shall be subjected to torture or other cruel, inhuman or degrading treatment or punishment. No one shall be subjected without free consent to medical, scientific or other experiments.

Commentary to art. 21

Dignity of the individual, as stated in the Preamble to the International Covenant on Civil and Political Rights, is an inherent property of all members of the human family, from which derive all the inalienable rights and which is based on freedom, justice and peace in the world.

Dignity - inalienable property rights as the supreme value, formed the basis of the recognition and the respect of all of his rights and freedoms

In his youth, during the continuous propaganda, the Soviet people I seemed to be quite a decent community of modern humans, which lacks a little freedom of action. However, I was wrong. The Soviet people have turned out to be canned, frozen community modes of absolute monarchy and the Bolshevik dictatorship; not cannibals, but not secular society. Probably the massive dismantling of concepts, including some cases of cannibalism in Russia may be another 100 years. Efforts are needed elite, for example, five-year plan the elimination of information literacy for the people living in a modern knowledge society. Apparently, young people should be encouraged to build elements of a new society, to show a correct picture of life, so as not to fall into shock from eating live or figuratively neighbor or disoriented and dying relative in search of happiness outside of postindustrial society.

In Russia, in the most resource-rich country in the world, after the collapse, defrost and re-entry of Soviet society stepped transition. Sensible persons specified Russian sovereignty in the Constitution of 1993, created a blueprint for the future, but do not teach people to use these new opportunities to build their happiness and the people remained disoriented with elements of the failed command-administrative system, sprouts of democracy, a new crime, new ethics, and other all kinds of factors modern civilization. Disoriented people continued, as in former times, to seek private and public happiness, get your hands on, in addition to low wages, impersonal equivalents property - vouchers that have been thrown to the wind unprepared population.

According to the UN Human Development Index ([HDI](#)) varies in Russia in the area of 55 out of 169 countries. Ie Russian citizens remain poor, surrounded by his wealth (could not, did not have time in the twentieth century to develop its economy on the basis of the command system), could not go on the search for the construction of his happiness. The UN has established March 20, 2012 [International Day of Happiness](#) : Russia's rating for happiness in the UN reports so far is small.

Compounding the material poverty of the society, uncontrolled media by inertia continue to impose public vague economic and political environment continue to consciously, often unconsciously, to manipulate public sentiments, form the concept of culture based on the songs and dances on the stage, and the ice, the other false targets to gain happiness man whose life continues to be measured is less than the contents of his small purse.

In our time, there has been a need to update all levels of social and humanitarian meaning of life and if they are not designed and practically designed, after the development of the public goods and meanings of scientific and technological revolution, the gadgets of our time in the present globalized world can happen a series of social catastrophes due the loss of reference points now thriving and developing communities.

The collapse of the traditional way (of any orientation in life) have been in the past, but not on a global scale. [I suppose that the complexity of the situation is due to the impossibility of repetition of the social history of developed countries developing.](#)

Modern challenges - the challenges of sustainable human development, community, Russia and all countries (without

P // SZ the Russian Federation 2000. N 27. Article 2882..) And belonging to it regardless of how he and the people around them perceive and evaluate his personality. Therefore, no matter how established himself man, whatever the qualities, including the negative, he may possess, the State and its authorities are obliged to fully ensure his conditions for the realization of all rights, ensuring human dignity. Ensure human dignity - it means first of all to treat it not as an object of influence on the part of the state, as well as an equal entity that can defend their rights by all means not prohibited by law (Part 2, Article 45 of the Constitution..) And argue with the government in the face any of its organs (the Constitutional Court judgment of May 3, 1995 N 4-P // SZ the Russian Federation. 1995. N 19. Art. 1764).

[Boris Mayorov I.](#) - site editor and author of the project suggests that the mass exodus of the population in most countries of the chimera and ideology begins in the modern era of globalization. Every nation is beginning to take evidence-based by UN, values based on the concept of "human dignity" that in the XXI century will be an axiom of public consciousness, the beginning of the calculation of sustainable development and human civilization, the main value of the community in every sense.

Like the Cartesian system of coordinates (x, y, z - knows each) and orientation heliocentric Galileo system, provided the development of modern science and technology. And today, for the modernization and for life after Nouveau (capitalism) need clear every modern man system of social dimensions.

To be in the tradition of fix and legislate specifically

human dignity. At the same time you want to include expert-digital methods of human happiness in the calculation of each smartphone, linking it through a super computer with the basic systems of coordinates of human life: the heliocentric, geocentric, socio-economic (public, civil, private). I propose today ten value orientations to solve problems of a person's own happiness, sustainability of any community from the family to the state, the evaluation of any steps governments in domestic and foreign policy. The national interests of the people in our post-industrial age should evolve into the universal values of the people and of all humanity of the Earth. That is the political and ethnic nation and national interests are transformed into values of sustainable communities based on necessary and sufficient happiness of each person in a particular locality.

In the XXI century it will be achieved universal information literacy, man today need to offer a set of systems, knowledge and skills that will enable him to identify and formalize primarily own the rights, freedoms and legitimate interests to maintain a sustainable livelihood values. Specifically, digital, rather than obscure methods and techniques should be everywhere to offer a sufficient set of information tools, indicating how to use it in accordance with legal and ethical standards of a particular locality. Even today, it is necessary to digitize technology, formalize and offer to each and every person methods address most situations in life, many convenient transparent value orientations with the necessary detail for each value and clear the relationship on the basis of human dignity.

Today, the majority do not read great literature, is not seeking and does not prove valuable reference for his life. Man needs to have time to develop new appliances, computer-controlled machines, PDAs, and other novelties. Modern man is not enough, and democracy, and its basic values - freedom. For the modernization of this society have to take into account and apply all the rights, freedoms and legitimate interests on the basis of human dignity, which will provide a firm basis for all areas of social interaction, vertical and especially horizontal relations in society that have not evolved since the days of slavery in Russia to this day: in they did not need to. All kinds of ranking, preserved in Russia since Peter the Great's times, it is necessary to change the code of ethics and rules on the basis of socio-economic conditions of the community or group of persons. I suppose that at the basis of the rule of law is not to be taken the life of society, and the rule of human dignity. Updated calendar will be created in Russia and for many nationalities separately. Population parted with many of the errors of the past culture and acquire modern landmarks.

Personal coordinate system based on human dignity, and in the near future and in view of the genome of each person must be implemented everywhere in the public mind and in the near future become the basis of social methodology, methods and mathematical modeling of the state and social movements matter. In this case, success will depend on the proportions and the level of power, monetary and educational regulation of social relations. Thus every conscious human dignity is the driving factor of self-government. To Europe and Russia plunged into chaos by a natural and free of division of property of the former USSR and the second resettlement of the people that we see in our time, it is

values of the consumer basket to the insurable value of every human life. At this point, the end of 2010, a common system of social scientific measurements do not exist. I hope that the dignity of everyone, the sun above his head and recommended by the calculations of values for each person in the coming years will be the basis of social relations, and my sketches in this area will be beneficial to my followers.

We must move away from voluntarism in state-building and social impromptu public and local administrations with the actions of the squares and streets of any settlements.

Today needs analysis and conclusions from the tragic mistakes of fascism, communism, and the beyond delusions of liberal growth of individual countries at the expense of the environment and the utopian ideas of the man over the last millennium.

An updated leadership, technology, sustainable value-oriented communities allow humanity to avoid wars and extend the life of the communities and the whole of the real human civilization to the extinction of all reasonable and live in the imminent [biological death of the planet Earth and the subsequent death of this variant of the universe.](#)

human interaction was mathematically transparent, reasonable and predictable. Digitization of the Earth work was successfully carried out [by Google](#), an impressive experience in the human body is represented in the digitization technology [Google old Body Browser](#). Any further progress will be linked to the formalization of the world community in the transnational project (part of the project can be implemented in Skolkovo, to compensate for the aggravated crime and corruption lag in democratization of the society, which was postponed in conditions of approaching 90 years of economic collapse, Russia). However, time dictates the need for the creation and implementation in Russia and post-democratic social relations.

In this case, now it is necessary to provide a minimum level of education for the understanding of each person the difference between different coordinate systems and time: astronomy, geocentric, local, social, personal. For example, a person in childhood, adolescence and maturity resides in a variety of personal time. [Community of our planet live in their social time](#) and the Earth - Sun have their astronomical time and calendar. A periodic activity of the Sun depends not only cross-cut to the annual rings of trees, but also the generation of quality. Rights, freedom and legitimate interests of gaining itself every generation, but at a different level. We can not allow one generation of a missile, and another generation of negligence, the collective or personal conviction of the national leader of its applications. We must not allow the appearance of third countries with nuclear arsenals and leading his Cold War, or the launch of its satellite: for example, the leader of music fans through the sale of forest around the Amazon tribe to broadcast songs about the leader. I believe that the current lead productive, if based on the inviolability of human dignity: open, distributed universally and rapidly; It does not inhibit the activity and promotes the value of human orientation for sustainable development.

[Today speed social processes following medium change rate](#). Modern civilization requires constant and popular attention to the human value orientations, including it's time to enter, and a single calendar for the inhabitants of the earth.

For example, no one thought, but it is possible for the sustainable development of the Caucasus there should not be expanded industry and demographics, as well as in China, introduce clear limits to everyone and provide jobs for young people in the densely populated regions of the developing regions of Russia and the rest of the world. However, the local government in developing regions should be introduced immediately. For me and the vector of development of Moscow - the big question. Moscow - continental metropolis. Our capital is not blown ocean winds as New York and therefore morality, social laws, codes of ethics and corporate social groups, the tradition of Muscovites in a separation of religion and state should be more reliable. Important today are the principles of openness and adequacy of the budget and the power control in Moscow, generating through media channels such actions all over Russia.

If we assume that modern Russia lags behind developed countries in Europe for 100 years, our society today, in 2010, part of the band appeal to a certain order of population (with the trends of the Italian banal or worse, German fascism

Today, much of our hands!

In addition to the main image of a person of values of 3 fingers, I suggest to all people friendly to each individual image of the creation and retention of happiness in the value system of coordinates on the basis of dignity (connected by two hands) 10 value orientations (10 fingers of both hands).

Can not give up - happiness will disappear.

[Google+](#)

missiles and warheads, for numbers of cattle, pigs and the like scattered indicators initial era of modernization . Therefore, scientific and political leaders, economic elite, all sensible people should be skillfully and carefully apply the social management measures in this period of our development, to offer the necessary centers of concentration of social initiatives, constantly take care of improving the material level and social culture, instill independence and tolerance of the population, the concept of personal sovereignty and sustainable livelihoods in today's capital and after capitalism has come to the developed countries. For example, do not have enough money: happiness can be increased at the expense of love, knowledge, work or other values (see figure), without forgetting that the main factor for men - a woman and vice versa for women - men. The transition to the value orientations of the population in the near future may start in young people giving up beer and cigarettes, and the adult population in the broad horizontal relationships begin to apply the law and ethic values in its relations with each other at home and at work, creating a postmodern economy. In this society with rooted human dignity in [the mentality of](#) the people is more convenient to start to put through personnel Army (previously there were forged frames for the dictatorship of the proletariat and the command-administrative system, and now there is a vertical relationship predominate), which can act as a generator of citizens with protected denomination for a new society. The gap between the people in power, money and knowledge will always flatten the legal and ethical standards. I believe the right to enter into the law on political parties is not only quantitative, but also the need for research and analysis of social management center. The author believes that in the modern era of globalization, universal social action and understanding of limited energy resources, begins a mass exodus of the population of all countries of the chimeras and ideologies. Following the scientific and technological revolution humanity will survive scientific and humanitarian. Each person, community, people will get reasonable value systems based on the concept of "human dignity" that in the XXI century will be an axiom of public consciousness, the constant in the tools of e-democracy, as a basis for the assessment and calculation of sustainable human development, community areas, and each state.

Descartes introduced the system of coordinates for the space x, y, z , and this from a school course everyone knows, but few people understand that its formation took place for at least 1,000 years, since our ancestors after the invention of natural numbers more 1000 years did not enter numbers Oh, which formed the basis of her.

Like Descartes coordinate system to ensure the development of modern science and technology, today to assess the first steps of building a happy life after Nouveau (capitalism) is necessary for the Humanities and understandable to every system of social measurement basis of human dignity. In this case, the conventional three landmarks (channel) on the power of social management

). In this case, today we must understand that the force (self-organization), money, and intelligence (knowledge) society does not grow linearly, they are objective wave cycles that will soon be found. This means that after the development of a community is quite possible period of decline, which requires reliable ties of protecting the community even from self-destruction. Any social action today can be estimated on the fingers. The ruling elite in many countries has more power, money and knowledge than the opposition or the population. This applies to Russia, which does not depart from the vertical device of his society, heightened Soviet period of its development. Each person from childhood need to foster respect for themselves and others, value orientation: citizen participation in local affairs and politics, both independently and as part of the local community on the horizontal level, in family matters and in the local economy, to attach to self-organization and local communities for secular ethics, adapted for each age group. For everyday communication between people in families for all the peoples of the world offer a simplified version of the same understanding of human values based on a half-open palm of your hand (fist) and three fingers. Hopefully, this symbol will become an element of information culture of all peoples. More complex software and information model of a personal calculator happiness propose to develop for personal mobile devices. [Mobile smartphones in the near future will be connected](#) not only to the map of the area, but also to the relevant social databases, which are now booming.

It is obvious that the political system of a society of sustainable development at the first stage will consist of the three spheres of social relations, of the three main directions (parties), which extends social energy: the scope of power, money and knowledge. All spheres intersect and have a common component on the basis of human

dignity and all this will enhance the value of each person, the personal happiness and well-being of the entire

own national scientific school, which at least will be determined by law. Political parties of the near future can only be based on open and parity own and national power and financial possibilities. In parliament the law of sustainable development will be fixed at least three fractions, which will be formed by parties acting independently of the interest received in the general election, as voters can not and must not have extraordinary opportunities for violations of sustainable development. At the same time countering any lawful public activities will be punished much more severely than at present. Such a political system of the three parties could be declared in Russia in 2015-2017 years by decree of the incumbent President or the All-Russian Constituent Assembly for 50 years and it will provide a balance of interests. However, social processes as the weather while hardly projected in a small period of time.

I believe that throughout the world the further development of existing democracies or authoritarian regimes based on the dictates of the ruling elite (or clans bureaucracy at various levels) are concentrated in their hands the power, money and knowledge will flow in the direction of the balance of these components. The imbalance is likely to cause, science, great literature, music, visual arts, but also bloody turmoil, as not all the opposition concentrates on literary or other peaceful exercise to denounce the regime, which in our time is devoid of the divine ground. A striking example of this imbalance showed the world Russia. Welcome to the nobility and dignity of its complete disregard for the population of the empire and created a classic art and Russian revolt.

Interestingly, the Aleksandr Sergeevich Pushkin, has repeatedly had fought a duel for the honor and dignity, in his work [The Captain's Daughter](#) of Russian riot word DIGNITY never applied, even though the commandant of the fortress Mironov, and Grinyov, and Pugachev, indirectly these fundamental human property endowed.

DIGNITY The word to describe the basic properties of a person is not in the works of Leo Tolstoy's War and Peace, and only in a few cases, it highlights the exquisite manners of some of the great heroes of the novel. In the work A. I. Solzhenitsyna Gulag Archipelago DIGNITY found half and only one piece with these words essentially "save before the destruction of human dignity" - the sixth part in chapter 1, where Aleksandr Isaevich recounts the life of the first exiled socialists 30s.

The complete edition Vladimira Lenina, in his 55-volume, I have not found the phrase "human dignity", but there are 2-3 similar phrases about mistreatment Tsarist authorities with citizens.

If I'm right, then in the near future is necessary for education to balance the social, physical and mathematical sciences, and establish three governing parties: Conservative Party of Russia (reliance on force), Liberal (Democratic) Party of Russia (reliance on the economy), the Progressive Party of Russia (knowledge base). Municipalities can always have a core of three elected commissioners in these areas as the basis of the local council, and at least another five to choose any representatives of citizens, regardless of membership in political parties, which can be many, depending on local traditions.

(Recall the text of Article 6 of the recent constitution, which was declared the role of one of the ruling party. "The

leninskim teaching, the Communist party determines the general perspectives of the development of society and the course of domestic and foreign policy of the USSR, directs the great creative activity with -Soviet people, and imparts a planned scientifically substantiated character to their struggle for the victory of communism. ")

Flat scheme developed political system of the National Society of Russia in XXI century with the three main parties 1.2 and 3, offering their community stabilization projects in the next elections will look like according to the figure stated above. However, any non-governmental organizations from three persons and above, and the media in particular should be built on a scientific basis and three pillars in all versions: the power, money, knowledge, rejecting as futile any congresses only economists, but filmmakers, intellectuals and generals as futile and erroneous in its declared structure - on one wheel is not to leave. For example, all of the successful party of the XX century were built on these foundations, and long-term success depended on correctly declared values and the basics of building lots.

Further sustainable development of Russia, the quality of growth of its civilization will be able to carry out only self-sufficient, value-oriented people on the basis of all understand and respect and protect human dignity. The masses of people are just beginning to enjoy all the rights, freedoms and legitimate interests of man and citizen to construct the meaning of their own existence, self-improvement and self-organization of communities, society and humanity. This is the key to a person's well-being, present and future in Russia, the population of the world in our time of transition from democracy to sustainable human development. This is the essence starting our eyes a second Enlightenment.
